

IRIDIUM Coverage Map

Iridium service is 100% global, it does this by using a large number of LEO (Low Earth Orbit) satellites that are moving across the sky at great speed. Your Iridium satellite phone connects with these LEO satellites for communication.

Iridium Coverage Map Home / Iridium Coverage Map Iridium is the only Satellite Network with a TRUE GLOBAL coverage, even on the North and South poles. Its network comprises over 70 Low Earth Orbit Satellites. Currently, this network is being upgraded with next gen satellites, all satellites will have been upgraded with the use SpaceX launch vectors by August 2018 to the NEXT(™) Satellite Network (depending on launch and orbital navigation success). Chosign Iridium, means choosing for the newest and the best.
